

# Are there any photovoltaic panels that can be installed

Can I install my own solar panels?

It is legal to install your own solar panels - but it's not a good idea, unless you're a certified solar installer. You'll need expertise in roofing and electrical work, as well as specialist equipment and - in most cases - scaffolding.

Should you buy a solar PV system for your home?

Well-chosen solar panels can provide a reliable source of renewable electricity for decades, helping to slash your electricity bills and cut your carbon footprint. But buying an inappropriate solar PV system for your home could leave you out of pocket.

What is a solar PV system?

Power being generated by solar panels or be used in a home. Here are some quick definitions to help you. Solar photovoltaic (PV) systems are made up of several panels. Each panel has many cells made from layers of semi-conducting material, usually silicon.

Can solar panels be installed on a new roof?

Solar panels are typically fitted on top of your existing roof, but you can also choose solar tiles and slates, which blend in better. However, these are pricey and may only be practical if you're replacing your roof at the same time.

Can solar panels be installed vertically or horizontally?

The panels themselves can be installed vertically or horizontally. Once the mounting system is set up, it's time for the moment we've all been waiting for: getting the solar panels onto the roof. Your installer will start by placing the solar panels onto the mounting system, without fully securing them just yet.

Are solar panels a good idea?

Cheaper bills for years to come. Reduce your carbon footprint By harnessing low carbon solar electricity, a typical home solar panel system could save around 800kg of carbon a year depending on where you live in the UK. This makes solar a great way to cut your carbon footprint. New solar installations more than do
