How do I know if my solar panel is bad?

Solar panel fault-finding guide including examples and how to inspect and troubleshoot poorly performing solar systems. Common issues include solar cells shaded by dirt, leaves or mould. Check all isolators are all on, and the circuit breakers have not tripped off. Check the grid voltage on the inverter display or app for over-voltage issues.

How to fix a broken solar panel?

The first step is to identify the broken solar panel. Once you have found the broken solar panel, you will need to remove it from the system. To do this, you will need to disconnect the power from the solar panel and then remove the screws that are holding it in place. Once the solar panel is removed, you can now proceed to the next step.

How do I know if my solar panel is broken?

To determine whether your system has solar panel cracks, look for hairline fissures under the angled light, and check for slight discoloration and a white, web-like snail trail pattern. Even if you buy the perfect solar panel and place it on a suitable roof, you are not immune to solar panels breaking.

What causes a broken solar panel?

The most common cause of a broken solar panel is cracked glass. If the glass on your solar panel is cracked, you will need to replace it. You can purchase a replacement solar panel online or at a local hardware store. Once you have replaced the broken solar panel, you can now proceed to the next step.

What should I do if my solar meter is faulty?

Contact your solar panel installer or a solar panel maintenance professional. If your generation meter is replaced, make sure you get a letter from the installer stating what they have done and that they changed the meter because it was faulty. The paperwork should also state the model and serial numbers of the old and new meters.

What should I do if my solar panels fail?

Double-check the wiring and grounding, as faults with them can lead to power loss, voltage drops, or electrical fires. Ensure your panels have enough natural airflow around them to provide proper ventilation. That way, you can prevent installation-related common problems with solar panels.
