

Can I drink milk tea if I put it in the locker

Can you drink tea with milk?

In Great Britain and some other parts of the world, tea is commonly consumed with milk. However, it's unclear whether adding milk to tea provides additional benefits -- or instead interferes with the activity of tea compounds in your body. This article provides an overview of the effects of adding milk to tea.

Does adding milk to black tea make a difference?

Proteins in dairy and soymilk do seem to bind and form a complex with tea's polyphenol compounds, which potentially reduce health benefits of drinking tea. However, with black tea, the few human studies there are suggest that adding milk does not make a difference to the amount or availability of tea's beneficial compounds.

Does drinking tea with milk keep you from absorbing the healthful substances?

Q: Is it true that drinking tea with milk keeps you from absorbing the healthful substances in tea? A: Although it's possible that you will get more of whatever health benefits can come from tea by drinking it without milk added, if you prefer your tea with milk, research is not strong enough to suggest that you change your habit.

Should you add milk to tea first?

Adding milk to the bowl first meant that it could withstand the heat of the water better. This is where, it's thought, the idea of adding milk to tea (and adding it first) came from. And, if you added milk after it was thought you were, well, rather fancy as it meant your china could handle the heat!

Can you drink black tea without milk?

Another study found that the consumption of black tea without milk resulted in higher levels of circulating antioxidants in the body compared to not drinking tea and drinking the same tea but with milk. A third study observed the same effects: the addition of milk to green tea and black tea reduced the tea's antioxidant content.

Does adding milk to tea affect the compounds in tea?

The effect of adding milk to tea may also depend on the type of tea, but the few studies on this topic have mostly focused on black tea. Since green teas are also rich in flavonoids, milk may theoretically affect the compounds in green tea similarly to how it affects the compounds in black tea.
