

Can the mobile phone airbag holder be exposed to the sun

Does a mobile airbag work if your phone falls?

The only downside is that the mobile airbag doesn't offer 100% protection. It only works if your phone falls on an even surface. If your device falls on the corner of a curb, for example, it may still get damaged. Nevertheless, Frenzel's invention has been a grand success winning him a top award from the German Society for Mechatronics in 2018.

How does a mobile airbag work?

engineering student, philip frenzel, has invented a mobile airbag to ease the heart-stopping moment your smartphone is hurtling towards the floor. the design comprises a thin protective case that uses sensors to deploy metal springs whilst free falling. the metal springs can then be reinserted into the case and reused.

What is a 'mobile airbag'?

This 'mobile airbag' is a specialized case that deploys springy, spider-like legs as it starts to fall. It is designed to protect a smartphone. A good case and a screen protector might provide some protection, but this invention offers additional security.

Does Frenzel have a mobile airbag?

Spotted by DesignBoom, Frenzel has created the mobile airbag, a case that senses when your phone is in free fall and releases metal prongs to protect it from damage.

Will a mobile airbag be on Kickstarter?

A student at Aalen University in Germany, Frenzel won an award from the German Mechatronics Society with the mobile airbag, and expects to launch the device on Kickstarter next month along with Peter Mayer, another student at the university, according to the German publication Preview Online.

Should you use an air vent mount on your phone?

If you use an air vent mount and are worried about the dangers to your smartphone, it's never too late to prevent further damage. If you have a car that allows you to turn off or close a vent, you should do this immediately. This will reduce the heat that comes in contact with your phone.

The sleek prototype features four corners that unfold when its sensors detect that the phone is in a freefall. These "dampers" help absorb the shock of the fall to keep the screen and internal components safe.

A German engineering student has invented a "mobile airbag" case design that automatically deploys when a phone is dropped. We already have several case options in the market that can protect mobile devices from ...
