

Can the round mirror cabinet be used for storage Does it contain formaldehyde

Are there formaldehyde-free kitchen cabinets?

More and more homeowners are looking for formaldehyde-free kitchen cabinets. That's because the cabinets made from pressed wood like particle board, hardwood, plywood paneling, and fiberboard typically contain formaldehyde. That's a problem because formaldehyde is considered a VOC, or volatile organic compound.

How can I reduce the risk of formaldehyde in my home?

There are ways to reduce the risk of exposure to formaldehyde, such as avoiding newly manufactured furniture made from particle board and looking for products with zero-VOC finishes. To avoid bringing any toxic chemicals into your home, look for organic and non-toxic products that are free of synthetic chemicals.

Should formaldehyde be used in a biological safety cabinet?

Therefore, formaldehyde should always be used with adequate ventilation, preferably in a fume hood, to minimize inhalation of vapor formaldehyde. Biological safety cabinets (BSCs) are not effective engineering controls, as formaldehyde vapors will go through HEPA filters and will be recirculated within the lab area.

Can wood products emit a low amount of formaldehyde?

The National Kitchen & Bath Association explains very well how wood products, such as those used in cabinets, can emit low amounts of formaldehyde. Let's take a look at this excerpt: "Formaldehyde, a naturally occurring chemical present in human breath, is widely used.

Do IKEA products contain formaldehyde?

According to the IKEA website, "trace amounts of formaldehyde can be found in our products as it is a naturally occurring substance, however, we do not add formaldehyde to our range. As a precautionary measure, IKEA has phased out several chemicals that could potentially be harmful, often ahead of legislation."

Which cabinet dealers offer formaldehyde-free & no-VOC cabinets?
