

Central African Republic: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Less than 3% of the population has access to electricity in Central African Republic. Grid-based electricity supply is insufficient to meet electricity demand: it is unavailable 28% of the year on average, mainly due to generation outages.

renewable energy in different countries and areas. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to [statistics@irena](mailto:statistics@irena) . Last updated on: 8th August, 2023

This monumental investment signals the inaugural step in a series of clean energy ventures slated for the Central African Republic. Plans include the development of large-scale solar energy, mini-grid installations, and off-grid solutions for households and public entities.

Today, the Central African Republic is launching a new 25-megawatt solar park with battery storage in Danzi village, located around 18 kilometers from Bangui. The park will supply electricity to 250,000 persons in the capital, almost doubling the country's electricity generation capacity

This project investment is the first of many designed to develop clean energy in the country, including large-scale solar energy, mini-grids, and off-grid solutions for households and public...

A solar PV and battery energy storage plant has been commissioned at Danzi, 18km north-west of the capital Bangui, according to the World Bank Group. The plant is a significant addition to CAR's under-developed grid, which had a total of 49.65MW online prior to Danzi's commissioning, according to African Energy Live Data.
