

How much money did China invest in power grid projects?

During the first four months of this year alone, China invested Rmb122.9bn (\$17bn) in its power grid projects, a 24.9 per cent year-on-year increase. That compares with the \$3.5bn announced last October by US President Joe Biden's administration, which covers 58 projects across 44 states.

Why is China's power grid creaking?

China's creaking grid represents a major constraint to progress on its green energy transition. During the first four months of this year alone, China invested Rmb122.9bn (\$17bn) in its power grid projects, a 24.9 per cent year-on-year increase.

What challenges will China's grid face?

Ken Liu, head of China renewables, utilities and energy research at UBS, said a critical challenge was the improvement of the dispatch system, or software that controls electricity flows to residential, commercial and industrial users. Liu expects as much as 15 per cent of China's total grid capital spending to be allocated to this software.

How much will China spend on electricity by 2030?

China's forecast capital expenditure is set to rise from about \$102bn this year to \$157bn by 2030, according to data from research group Rystad Energy. Despite China's huge spending programme, there are signs of increasing pressure on the distribution and transmission of electricity.
