

The Beyond the Grid Fund for Africa (BGFA) has signed two new agreements in Uganda to establish new mini-grids and scale up distribution of solar-powered refrigerators in the country. Access to electricity and off-grid refrigeration will allow small and medium-sized businesses in rural communities to establish new ventures to support economic ...

The Renewable Energy and Energy Efficiency Partnership estimated the potential of solar cold storage for perishables in Uganda and found that despite improving agricultural production (reducing post-harvest losses), solar cold storage will be able to save >100 000 tonnes (equivalent) of CO<sub>2</sub> emissions a year by 2030; this avoids GHG emissions.

Solar Nation Uganda can help you reduce your fuel bills ... Energy Audit, Technical Surveys and Solar system design; Solar system/Components servicing and Maintenance; Electrical Installations; Solar Water Heating Systems; Solar Street Lighting Systems; General Procurement and Supplies; Solar Cooling & Refrigeration; Products. Solar Panels ...

solution for dairy farmers in Western Uganda. Of the country's 2.5 million small dairy farmers, 85% lack access to affordable cold storage, resulting in spoilage and significant losses in earning potential. OneLamp's system consists of a 650W solar home system with ...

A Ugandan private company dealing in planning, designing, supply, distribution, installation, maintenance and repair of various solar energy solutions which deliver modern energy services to households, commercial enterprises and communities especially those located in the remote off-grid communities where over 80% of the population reside and ...

With Uganda's solar potential, Station Energy has developed an innovative concept of solar cold room for fresh product refrigeration/freezing in remote areas. This solution is especially adapted for agricultural cooperatives and is focusing on an energy service model with rental of containerised cold room facilities.

WE Coolers provides farm-based solar powered milk cooling systems that enable dairy farmers to preserve their milk before it is delivered at the milk collection centres. Our system contains solar panels that power a freezer with a unique adaptive control unit for smart Ice making; the ice is then placed in specially designed milk cans together ...

WE Company's solution enables solar-powered ice production in addition to lighting and helping meet rural unmet energy demand while Reducing Carbon emissions. Health & Hygiene WE Company's implementation of a farm-based solar milk cooling system which reduces the potential for microbial contamination and increases rural hygienic standards ...

Solar panels provide the required power to run the cooling system. The SunCooler enables farmers to cool their food supplies close to home (longer shelf life) at lower costs and with a lower environmental impact.

With Uganda's solar potential, Station Energy has developed an innovative concept of solar cold room for fresh product refrigeration/freezing in remote areas. This solution is especially adapted for agricultural cooperatives and is focusing ...
