

Costa Rica has important coral reef areas. On the Pacific coast, 47 zooxanthellate coral species have been identified, and on the Caribbean coast, the inventory reports about 41 species of hard corals. The country has also made international commitments for the protection of these ecosystems, reflected in the National Biodiversity Strategy (NBS).

Reefs with low coral cover and high macroalgal abundances are often presumed to provide poorer ecosystem functions and services. In this study, we assessed the condition of coral reefs on the Caribbean Coast of Costa Rica and determined how eight key ecosystem metrics varied in response to different coral and fleshy macroalgae covers.

In Costa Rica, reducing the share of young adults without an upper secondary qualification has been a priority. The share of 25-34 year-olds without upper secondary educational attainment decreased by 11 percentage points between 2016 and 2023. At 38%, it is 24 percentage points above the OECD average in 2023.; In Costa Rica, 65% of 25-34 year-olds without an upper ...

Above 1500 meters you get into Highland ecosystems of Costa Rica. There are also some other ecosystems in Costa Rica not included in the life zones categorization, such as the coral reefs ...

"Over recent decades, Costa Rica has had a clear national consensus on the role of the health care system. In particular, efforts towards increasing access to the primary care were accelerated in the early 1990s, when Costa Rica opened up community clinics called Basic Comprehensive Health Care Teams (Equipos

B&#225;sicos de Atenci&#243;n Integral de Salud, EBAIS).

Above all, the achievements of Costa Rica's health system from 1995 onwards stem from the strong determination of the Costa Rican government in prioritizing population health and development. In the 1990s, during the creation of the EBAIS system, 7% of the GDP was allotted to the health care system, of which only 30% came from private funds ...
