

What does Rosetta do?

Rosetta is an international energy developer and operator focused on transitioning the energy ecosystem in Emerging Markets to a clean and sustainable future. Utilizing LNG as a transition fuel, Rosetta displaces the use of higher GHG-emitting fuels, while developing zero-carbon solutions on a pathway to decarbonization.

How does Croatia get its electricity?

Croatia satisfies its electricity needs largely from hydro and thermal power plants, and partly from the Krsko nuclear power plant, which is co-owned by Croatian and Slovenian state-owned power companies. Renewable energies account for approximately 31.33% of Croatia's energy mix.

Could geothermal energy be a source of sustainable power in Croatia?

SARAJEVO, June 6 (Reuters) - Croatia is eyeing geothermal energy as a major source of sustainable power and has just closed an auction for six productive exploration sites to interested bidders, a top energy official said on Tuesday.

What is Croatia's solar energy potential?

"Croatia's solar energy potential estimated at 6.8 GW", Balkan Green Energy News. Retrieved 18 March 2022. ^Spasic, Vladimir (10 November 2021). "Croatia to add 1.5 GW of renewables by 2025", Balkan Green Energy News. Retrieved 18 March 2022.

Does Croatia have a national energy and Climate Plan?

To achieve its goal, Croatia set up a 2030 National Energy and Climate Plan. The national strategy aims at a 36.4% share for renewable energy by 2030 and significant investment across the energy sector, including hydropower, wind farms, solar photovoltaic plants, and hydrogen energy.

How can Croatia achieve a low-carbon economy?

Croatia wants to cut its CO₂ emissions by 45% by 2030 and to abandon coal by 2033. But the transition to a low-carbon economy won't be easy, requiring major investments in new energy infrastructure and increased renewable energy resources. To achieve its goal, Croatia set up a 2030 National Energy and Climate Plan.

Energy in Croatia describes energy and electricity production, consumption and import in Croatia. As of 2023, Croatia imported about 54.54% of the total energy consumed annually: 78.34% of its oil demand, 74.48% of its gas and 100% of its coal needs.

Croatia wants to cut its CO₂ emissions by 45% by 2030 and to abandon coal by 2033. But the transition to a low-carbon economy won't be easy, requiring major investments in new energy infrastructure and increased ...

Croatia is eyeing geothermal energy as a major source of sustainable power and has just closed an auction for

six productive exploration sites to interested bidders, a top energy official...

Originating from a vision to redefine the energy landscape, Rosetta Energy was founded with a clear mission -- to pioneer cutting-edge projects that transcend traditional energy boundaries. Our roots are firmly planted in a dedication to cleaner, more ...

We invest, develop and operate innovative, cost-effective and environmentally responsible energy solutions. Utilizing Liquefied Natural Gas as a transition fuel, while developing longer term opportunities in zero-carbon fuels and technologies.

Croatia wants to cut its CO₂ emissions by 45% by 2030 and to abandon coal by 2033. But the transition to a low-carbon economy won't be easy, requiring major investments in new energy infrastructure and increased renewable energy resources. To achieve its goal, Croatia set up a 2030 National Energy and Climate Plan.

Rosetta is investing in and developing a large-scale LNG receiving and regasification terminal in Somaliland, primarily serving a planned power plant and industrial customers. Rosetta will import LNG from international markets, regasify it and deliver it to the customers.

Rosetta envisions a transformation from low CO2 solutions to fuels of the future that include hydrogen (H2), ammonia (NH3) and biofuels. Enabling our green transition is LNG which we believe addresses the imminent need for cleaner and more reliable energy in emerging markets.
