Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

Do I need planning permission for solar panels?

For more information, contact your local planning authority - your local council - for advice about planning permission for solar panels. If you are a leaseholder, you'll also need the permission of the freeholder to install solar panels. Is my home suitable for solar PV panels?

Can solar panels be installed on a house?

If you're getting solar panels installed onto the roof of your house, the installers will need to construct scaffolding around the building before they can crack on with the process. This will take the most time out of all the steps - usually about a day - but will mean the installers can have safe and secure access to the roof.

Do solar panels need a battery?

Some people also decide to pair their solar panels with a solar battery, which will store excess solar energy to be used on cloudy days or during the night time. If you have a solar battery in your system, the battery also needs to be connected to the inverter at this point. Find out more about how solar batteries are installed on our page.

Do you need a professional to install solar panels?

Despite being intricate bits of kit that can generate electricity from the sun, solar panels are pretty straightforward for a professional to set up. Before an installer is able to crack on with the actual installation, a professional surveyor will need to go into your loft and check the integrity of both the roof and the rafters.
