## Ecuador I48 energy

#### How much energy does Ecuador use?

In 2021,the country consumed 21 thousand short tons,15 which it imported primarily from the United States,followed by Peru. Ecuador relied heavily on fossil fuel (which include oil,natural gas,and coal) production for power generation a decade ago,with fossil fuel-powered plants accounting for about 43% of total energy production in 2011.

#### Does Ecuador have an electricity market?

In this research, an analysis of the electricity market in Ecuador is carried out, a portfolio of projects by source is presented, which are structured in maps with a view to an energy transition according to the official data provided.

What is the main source of energy in Ecuador?

Petroleumand other liquids continue to be Ecuador's primary source of energy; crude oil accounted for 63.4% of total energy consumption in 2021. The country has significant oil reserves and is one of South America's top oil producers.

How has Ecuador's energy consumption changed over the years?

Ecuador's energy production increased by a compounded growth rate of 0.5% per year from 2011 to 2021, and renewables accounted for most of the increase. The country's energy consumption also increased by a compounded growth rate of 0.5% per year over the same period, down from 4.9% per yearthe decade prior.

What is Ecuador's energy policy?

1. Policy Ecuador's 2008 Constitution explicitly states that the government will promote the use of clean and alternative energy sources, in addition to energy efficiency, while providing access to public services, preserving the environment and maintaining food and water security, among others.

### How does Ecuador generate electricity?

Ecuador's mountainous terrain and numerous rivers allow for hydroelectricpower generation. The launch of several large facilities since 1983 has solidified the hydropower sector's leading role in Ecuador's electricity generation mix (Table 3).
