Spain is at the forefront of the energy transition due to its energy and climate change policies. The current Spanish framework for energy and climate is based on the 2050 objectives of national climate neutrality, 100% renewable energy in the electricity mix and 97% renewable energy in the total energy mix.

The article's findings underscore Spain's proactive engagement in adopting renewable energy solutions, driven by favourable climatic conditions and a strong policy framework at both national and EU levels. This aligns with broader objectives of reducing carbon emissions and transitioning towards a more sustainable energy system.
