

Estonia has seen a significant increase in its solar power capacity in 2022, becoming one of the leaders in solar power per capita among EU members. With growing investments and innovative startups, it now aims to be fully green ...

Estonian startup Solarstone has developed two solar tiles with an efficiency of up to 19.5% and an operating temperature coefficient of -0.41% per C. It recently secured EUR10 million in funds to...

The planning of the Risti solar park has placed great emphasis on technological innovation to maximize clean electricity production during peak demand times. The park's panels will track the sun, ensuring greater efficiency during mornings and evenings when electricity consumption is highest. The main contractor for the project is Connecto.

The planning of the Risti solar park has placed great emphasis on technological innovation to maximize clean electricity production during peak demand times. The park's panels will track ...

Estonia has seen a significant increase in its solar power capacity in 2022, becoming one of the leaders in solar power per capita among EU members. With growing investments and innovative startups, it now aims to be fully green-powered by 2030.

Solarstone, an Estonian producer of building-integrated photovoltaic (BIPV) solar roofs, has opened a 60 MW manufacturing facility in Viljandi, Estonia, to produce a broader range of design and...

The analysis of solar radiation patterns in all four regions of Estonia for the summer and winter seasons reveals the feasibility of solar power generation as the radiation pattern is nearly similar. In this study, three different PV-rated systems for domestic and commercial installations are discussed.

While there's a parallel conversation underway among advocates and policymakers about making microgrids and distributed solar a more permanent feature of the grid, Footprint also hopes to inspire some of ...

In Tartu, a pilot project on microgrids involving municipal government, the private sector and the emerging energy community is currently underway. The municipality is comparable to a public service contractor, the service is provided by the same company that needs the energy, and the energy is produced by a cooperative on the municipality's land.

Estonian startup Solarstone has developed two solar tiles with an efficiency of up to 19.5% and an operating temperature coefficient of -0.41% per C. It recently secured EUR10 million in funds to ...

Estonia microgrid solar

Estiko Energia OÜ has constructed 13 solar parks with a total capacity of 2.3W across Estonia. The electricity generated by the solar parks is distributed to end-users, the power network and, via a direct line, to the companies of Estiko Group.
