"Geographically they remain islands; electrically neither of them are. Both are linked by high voltage cables to their respective national grids." The significance of this, Mr Ross explained, is these other islands can then feed back into the European grid when they need to curtail output if too much energy enters the system from a surge in ...

We supported an MOD contractor who was working on an electricity grid at an airbase in the Falkland Islands. Temporary power support was required while 39 x 11kV substations were being upgraded on the airbase. The key requirement was that the generators needed to be robust and reliable, as any issues would be difficult to fix, due to limited ...

There are now in excess of 100 x SD3 wind turbines on the islands, widely regarded as the largest off-grid small scale wind turbine fleet in the world - providing 24 hour power to over 85% of the islands farms and rural dwellings.

The upland goose or Magellan Goose is a sheldgoose of the shelduck-sheldgoose subfamily This bird is indigenous to the southern part of South America. The ruddy-headed goose breeds on open grassy plains in
