

Should the Faroe Islands be self-sufficient?

Isolated in the North Atlantic Ocean, the Faroe Islands need to be self-sufficient in terms of electricity generation as the Faroese electrical grid is not interconnected to neighbouring countries. SEV operates six hydro power plants, three thermal power plants, three wind farms and one solar power plant.

Why is SEV the main power supplier in the Faroe Islands?

SEV is the main power supplier in the Faroe Islands. We operate on 17 of the 18 islands that constitute the Faroe Islands. Isolated in the North Atlantic Ocean, the Faroe Islands need to be self-sufficient in terms of electricity generation as the Faroese electrical grid is not interconnected to neighbouring countries.

Are there renewables in the Faroe Islands?

"In the Faroe Islands, we are blessed with renewables: we have wind, hydro and some sun in the summer; we also have tidal and wave power where we can see great potential," says Nielsen. Since announcing its green vision in 2014, SEV has already done a lot to increase the share of renewables in its energy mix.

How many wind farms are there in the Faroe Islands?

Furthermore, external suppliers operate one wind farm and one biomass plant. Total installed capacity in the Faroe Islands is 163 MW and total power generation in 2019 was 386 GWh. Max demand was 63.1 MW in November 2020. In 2018, 49% of power generation came from renewable sources, i.e. hydro and wind power, respectively.

Is the Faroe Islands going green?

Nielsen is Head of R&D at Elfelagið; SEV, the publicly-owned, primary power-producer on the islands, and he has a clear vision: "Our future energy supply in the Faroe Islands is green. We have set a goal of becoming 100% green by 2030 in terms of on-shore electricity."

Can the Faroe Islands be a smart microgrid?

"The energy system in the Faroe Islands is an impressive example of how all available energy resources can be integrated into a smart and innovative microgrid," says Vehkakoski.

Faroe Islands, an isolated archipelago in the North Atlantic Sea, have ambitious goals for a bright green energy future. By year 2030 the Faroe Islands aim for 100% green electrical energy. Due to its favourable site conditions, the islands are surrounded by renewable energy in the form of hydro, wind, tides and waves, and to a certain extent ...

For more information on the energy practices in the Faroe Islands, watch the following videos: Bjarti Thomsen about Energy Efficiency in Faroe Islands. Electric cars. Energy measures in the island of

N&#243;lsoy. Seawater heat pump system at Sj&#243;vinnuh&#250;si&#240;. Husahagi wind ...

Isolated in the North Atlantic Ocean, the Faroe Islands need to be self sufficient in terms of electricity generation as the Faroese electrical grid is not interconnected to neighbouring countries. SEV operates six hydro power plants, three thermal power plants, three wind farms and one solar power plant.

The Faroe Islands are aiming for complete sustainable energy supply by creating a smart and innovative micro-grid. Far from continental Europe and surrounded by a vast sea, the Faroe Islands lie in the middle of the North Atlantic between Iceland and Norway.

One of the Nordic islands playing a significant role in advancing green energy initiatives for places that are isolated or distant is the Faroe Islands. The Faroe Islands, like all other countries in this part of the world, are undergoing a green transition in energy production and energy use.

The ambition is to obtain ground source heat for half of all heated houses on the Faroe Islands by 2025. Using heat-pumps will enhance the transition to a fossil-free society. The heat-pumps extract and transfer heat from the ground into a house.
