This book uniquely covers both the physics of photovoltaic (PV) cells and the design of PV systems for real-life applications, including: - The fundamental principles of semiconductor solar cells. PV technology: crystalline ...

It goes up to the mid-1990s, so is a good complement to my own book, which takes you up the present. Perlin's book is a history of the first 40 years of solar, when it was used almost entirely for off-grid applications. My ...

$r$  = PV panel efficiency (%)  $A$  = area of PV panel ( $m^2$ ) For example, a PV panel with an area of  $1.6 m^2$ , efficiency of 15% and annual average solar radiation of  $1700 kWh/m^2/year$  would generate:  
 $E = 1700 * 0.15 * 1.6 = 408 kWh/year$  2. ...

The book doesn't cover everything you need to know. Toll often glosses over the finer details of a topic in favor of the high-level overview. This wouldn't be my book of choice to reference for building a home energy ...
