How do I troubleshoot a solar photovoltaic system?

Troubleshooting a PV solar photovoltaic system will typically focus on four parts of the system: the PV panels, load, inverter, and combiner boxes. The all-around best tool to use for working in most areas of a solar installation is the Fluke 393 FC CAT III 1500 V Solar Clamp Meter .

What happens if a solar panel wiring is loose?

Loose wiring can cause unexpected electrical issues. Remember that your solar panel system includes a specific network of wiring, linking individual PV cells to each other, to home solar batteries and to inverters. Because of this, there are many places where connections might fail. To correct wiring faults, you should talk to an expert.

How do I know if my solar panel is bad?

If in the rare case you are having an issue, diagnosing solar panel problems can seem challenging. For instance, you may notice that your system isn't producing its original power, but you might not know why. Extreme variances in performance are usually due to one of several issues. Loose wiring can cause unexpected electrical issues.

How can I tell if my PV system is malfunctioning?

To determine if there's a problem with your PV system, measure the voltage on the solar array at the combiner box, load switches, fuses, and breakers to see if the proper voltage is present at the load's connections. Keep in mind that issues with electrical loads can also impact the performance of the PV system.

How do I know if my solar system is working?

Check the solar system performance data on the app and website, if available. Check the solar panels for dirt, leaves, mould, or shade issues. Check the solar inverter for any warnings or faults. Check that the isolators are all on and that the circuit breakers have not tripped off.

How do I know if my solar PV breaker is bad?

First check the solar pv breaker in your consumer unit. It should be in the on/up position. If it's in the off/down position (which can happen after a power cut) try to flick the switch back on. If it trips back to the off position, leave it off and call an engineer. Also check your inverter for any fault codes or error messages.
