What is the best angle for solar panels in the UK?

Generally speaking, the best angle for solar panels in the UK is about 35 degrees from horizontal, although this varies very slightly around the country. A study from 2021 revealed that the best angle for solar panels is typically somewhere between the latitude of the location and 15 degrees below that figure.

What is the optimal tilt angle for solar panels?

The first number is the optimal tilt angle for your solar panels. This means my optimal tilt angle is 35° from horizontal. The second number is my optimal azimuth angle -- the direction I should face my solar panels -- expressed in degrees clockwise from north.

How do I find the perfect tilt angle for PV panels?

Modern technology comes to our aid when determining the perfect tilt angle for PV panels. The solar tilt calculator uses a complex formula that empowers you with a simple way of finding the perfect angle that your PV modules need to be based on your geographic location and orientation of your roof.

Do solar panels need a 49-degree tilt?
