Working collaboratively with the manufacturer,Kooltronic engineers modified a closed-loop air conditioner to fit the enclosure,cool the battery compartment,and maximize system reliability.

How do you install an indoor air conditioning unit?

However, if you decide to do the work yourself, mount the indoor air conditioning unit on an interior wall away from direct heat or light sources. Run the piping and wiring from the indoor unit through a hole in the wall, then attach a PVC drainage pipe to the unit, running down the exterior of the wall where the unit is attached.

How do you attach an air conditioner to a wall?

Secure the indoor unit to the mounting plate. To attach the air conditioner to the wall, simply align the female connections on the back of the unit with the male connections on the mounting plate and press firmly to secure the unit in place. Make sure the unit tilts backward 2-3 degrees so that water can flow out of the drain pipe.

How does a cabinet cooler work?

A cabinet cooler works by drawing hot air from the interior of the cabinet over a heat exchanger and blowing the cooled air back into the cabinet. The heat absorbed is then transferred to an outside heat exchanger where it is cooled by ambient air using another fan.
