

How to sell the station-type energy storage system

What is station use energy?

Station Use: "Station use" energy refers to energy that is required for the operation of an energy generation or storage resource in order for such resource to operate. For certain types of resources the station load can be significant.

What is an energy storage project?

An energy storage project is a cluster of battery banks (or modules) that are connected to the electrical grid. These battery banks are roughly the same size as a shipping container. These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems.

What is a battery energy storage system?

These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems. Some installations use technologies other than batteries to store energy, but batteries are the most common technology. How does a BESS work?
