How does a storage bus work?

The storage bus supports bi-directional movement of items, it both extracts and inserts items into the attached inventory, as long as it has room, or the block allows the items to be inserted.

Do you need a storage bus for AE2?

Due to AE2's philosophy of emergent mechanics through interaction of the functions of the devices, you don't necessarily have to use a storage bus for storage. By using subnetworks to make a storage bus (or handful of storage busses) the only storage on a network, you can use it as a source or destination for item transfer. (see "pipe subnet")

Why do I need a storage bus?

They can also be used to route items passively into Buildcraft Pipes. If you place a storage bus on an ME Interface the storage bus will be able to interact with the full contents of the target network, unless that interface is configured to store items inside itself, in which case it will see those stored items.

Can a subnet be used as a storage bus?

By using subnetworks to make a storage bus (or handful of storage busses) the only storage on a network, you can use it as a source or destination for item transfer. (see "pipe subnet") They are cable subparts. By default the bus will store everything.

What is network storage in AE2?

your ME system and the world An important concept in AE2 is the idea of Network Storage. It is the place in which the contents of a network are stored, usually storage cells or whatever inventory a ME Storage Bus is connected to. Most AE2 devices interact with it in one way or another.
