Should landowners invest in solar farms?

Further to this, landowners are turning to the development of solar farms (which is a fantastic farm diversification idea) as a way to generate additional streams of income, buoyed by an ever-increasing renewable energy investment market and favourable development conditions led by various government incentive plans.

How do solar farms work?

Solar farms usually have hundreds to thousands of solar modules installed in a large field. Solar farms send solar energy to electricity grids, which, in turn, lessens their reliance on power produced by fossil fuels. Are you interested in joining a community solar farm?

Should I start a solar farm?

Starting or subscribing to a solar farm can be a great way to save money, reduce your carbon footprint and make the most of rapidly changing solar technology. However, there are several things to remember before investing in one. If you have the available land and resources, starting a solar farm yourself can be a worthwhile investment.

Do you need consent for a large solar farm?

Larger scale solar farms require consent directly from the Secretary of State, and we are pleased to say that we received consent for our largest project to date, Longfield in Essex, in Summer 2023. Once operational, it will have the capacity to power approximately 60,000 households.

What is a community solar farm?

In contrast, community solar farms sell directly to end-consumers of electricity, such as homeowners and renters. A utility-scale solar farm (often referred to as simply a solar power plant) is a large solar farm owned by a utility company that consists of many solar panels and sends electricity to the grid.
