What is a C&I energy storage system?

A C&I (Commercial and Industrial) energy storage system is an energy storage solution designed for commercial and industrial applications, such as factories, office buildings, data centers, schools, and shopping centers.

What is a heat storage system?

These systems consist of a heat storage tank, an energy transfer media, and a control system. Heat is stored in an insulated tank using a specific technology. Utilizing these systems reduces energy consumption and overcomes the problem of intermittency in renewable energy systems.

What are energy storage solutions?

Our energy storage solutions are designed to ensure businesses will have power to meet their facility's critical power needs. For many companies the most significant portion of the electric bill are the demand charges which are based on the highest amount of power drawn during any 15-minute interval billing period.
