

The objectives of this work are: (a) to present a new system for building heating which is based on underground energy storage, (b) to develop a mathematical model of the ...

This work presents the materials selection process, the design and the dimensioning process of a latent heat storage tank that works between a high temperature heat pump and an Organic Rankine Cycle unit.

The predominant effect of supply water temperature for heat pump performance is also the outcome of the system design analysis presented in the study by Zhao et al. The proposed ...

Learn more about heat pumps for solar thermal storage systems, including the basic principles, applications, benefits, and maintenance tips. ... The next step in the design and installation process is to determine the placement ...
