

Is Dali suitable for solar power generation

Can a Dali version 1 power supply be used as a control device?

Additionally, they were prohibited from using the DALI version-1 trademarks since their bus power supplies did not need to pass obvious tests before use. Therefore, the DALI version-1 trademark cannot be used by any control device or bus power supply that predates DALI-2.

What are the advantages of a Dali system?

Moreover, controllable DALI devices were installed which can set the luminous intensity of each individual light point between 10 and 80 percent. In addition, the system enables the operators to program different types of lighting scenarios with varying luminous intensities and light points.

What are the advantages of Dali emergency lighting?

The decisive advantage of the emergency lighting function of DALI devices is the recognition of CD voltage or pulsating AC voltage at the mains connections. In this event, the maximum light value (100 %) is set automatically - as far as it hasn't been individually set otherwise during free parameterization.

What is a DALI device?

With a range of lighting scenario storage functions, DALI devices enable comfortable and individual light settings in the room. In combination with special daylight sensors, the Touch DIM[®] function creates comfortable lighting conditions in the room while achieving high levels of energy efficiency.

Can A DALI device be used with a motion sensor?

Thanks to the corridor function, DALI devices can also be used in combination with standard motion sensors - e.g. with the OSRAM DUO sensor (see also page 11), which allows switching off the lighting when there is enough daylight. In path and area lighting, e.g. in school corridors, energy saving potentials can thus be fully exploited.

What is digital addressable lighting interface (Dali)?

The Digital Addressable Lighting Interface (DALI), was first released in the early 1990's and has been a leading lighting control protocol ever since. Developed as a digital successor to analog dimming, DALI allows for networked control of individual luminaires, groups of luminaires, or all luminaires via a connection to the DALI bus.
