

# Is it good to use solar panels at home

Should you install solar panels at home?

Having solar panels installed at home sounds like an appealing idea. You get free electricity when the sun shines, potentially cutting your energy bills and doing your bit for the environment without having to give it much additional thought.

Are solar panels a good idea?

By harnessing low carbon solar electricity, a typical home solar panel system could save around 800kg of carbon a year depending on where you live in the UK. This makes solar a great way to cut your carbon footprint. New solar installations more than do

Why should you choose a solar panel system?

Sunlight is free, so once you've paid for the initial installation, your electricity costs will be reduced. Solar electricity is low carbon, renewable energy. A typical home solar panel system could save around one tonne of carbon per year, depending on where you live in the UK.

Should you consider solar panels as a home improvement?

It's also worth considering solar panels' value as a home improvement. Solar panels are attractive to potential new homeowners when you next sell your home, which can increase your property value as a result.

Why do people install solar panels on their homes?

Reducing their dependence on grid electricity and the country's dependence on imported electricity was the motivation for some owners to fit solar panels on their home, according to our survey.

Should you store solar energy and use it yourself?

The price you're paid for each unit of energy you export to the grid is usually much lower than the price you pay your supplier for electricity. So, economically, it makes more sense to store the solar energy and use it yourself - with E.ON saying a household with a battery could use 30% more of the electricity they generate themselves.
