

Mauritius storage of lithium batteries hse

Why is battery energy storage system being introduced in Mauritius?

In view of the increasing share of the Variable Renewable Energy (VRE) in the energy mix of Mauritius, the CEB has planned for the introduction of Battery Energy Storage System on its network to arrest the fluctuation inherent to the VRE systems. The Mauritian energy transition to a low carbon economy is picking up speed.

How will Mauritius transition to a low carbon economy?

The Mauritian energy transition to a low carbon economy is picking up speed. The CEB has installed the first grid-scale Battery Energy Storage System (BESS), the first in its kind in Mauritius, to enable high capacity storage of renewable energy in the grid.

How do you manage a lithium-ion battery hazard?

Specific risk control measures should be determined through site, task and activity risk assessments, with the handling of and work on batteries clearly changing the risk profile. Considerations include: Segregation of charging and any areas where work on or handling of lithium-ion batteries is undertaken.

Are lithium-ion batteries safe?

It's important to be aware of the other safety hazards either directly linked to or potentially associated with the use, storage and /or handling of lithium-ion batteries: Electrical hazards /safety - high voltage cabling and components capable of delivering a potentially fatal electric shock.

What policies should be in place for lithium-ion batteries?

Clear policies and rules should be in place specific to provision, storage, use and charging of equipment containing lithium-ion batteries, these being formally communicated at induction, through regular toolbox talks and on signing-in where visitors and contractors are concerned.

Why should you use lithium ion batteries for risk management?
