What is a microgrid report?

This report provides (1) an overview of the microgrid planning, assessment, and design process for DoD installations and (2) is a resource for energy managers, policymakers, contractors, and other stakeholders involved in microgrid projects.

What should be included in a feasibility assessment for microgrid projects?

A feasibility assessment for microgrid projects should include all aspects of historical energy use/cost analysis, individual project identification, physical site/facilities due diligence, and projected financial and environmental benefits for projects meeting energy cost savings goals and resiliency objectives for critical loads.

What is a microgrid design guide?

This guide is meant to assist communities - from residents to energy experts to decision makers - in developing a conceptual microgrid design that meets site-specific energy resilience goals.

What is a microgrid conceptual design assessment?

As part of a microgrid conceptual design assessment, we ask communities to identify critical needs, critical operations, and critical functions they believe need to remain in operation for a range of events that could vary in severity and duration.

What is a microgrid assessment process?

The process provides an overview of the basic steps and high-level information as well as analysis that is required for microgrid assessment. It is not intended to capture every detail of a project but rather to provide a general overview.

What is a microgrid project?

The primary goal for microgrid projects is to increase the energy resilience and enhance the ability to serve an installation's electrical loads during a contingency situation.
