### What are harmonic mitigation strategies in microgrids?

Figure 6 shows three main harmonics mitigation strategies in microgrids: harmonic filters, advanced control algorithms, and droop control strategies. One approach is to use harmonic filters, devices designed to remove harmonic currents from the system.

#### What are the global trends in harmonic mitigation methods of AC microgrid?

Furthermore, this overview draws a sketch on the global trends in harmonic mitigation methods of an ac microgrid directly applicable to today's smart grid applications. The microgrid concept has been emerged into the power system to provide reliable, renewable, and cheaper electricity for the rising global demand.

### Why are voltage and current harmonics important in microgrids?

Voltage and current harmonics are an important power quality concernin single-phase microgrids. Harmonic distortion increases the power losses and may cause stability problems particularly in islanded microgrids. Current harmonics can be injected by the DG units due to poorly designed control loops.

Can a microgrid cause harmonic distortion?

These DERs often include power electronic converters that can introduce harmonic distortion into the system. Microgrids often have a high penetration of non-linear loads, such as lighting and heating systems, which can also contribute to harmonic distortion[42].

Are harmonics affecting the power quality of a microgrid?

Power quality issues are a serious challenge in microgrids due to the increasing complexity, with deep penetration of linear and non-linear loads and numerous Distributed Energy Sources. Harmonics are found to have deteriorating effects on the microgrid. The ever-increasing complexity of the microgrid poses a serious challenge for both large users and utilities.

How much harmonics injected in a microgrid?

When drives are operated at 10% of full load, harmonics injected into the AC side is higher, for example, the total harmonic distortion (THD) is 111.25% for conventional drives and 131.53% for small dc link capacitor drives. However, when drives are operated at full load, harmonics injection into the microgrid is lesser in comparison.

In this paper, a new method for harmonic compensation in microgrid based on the proper control of distributed generation interface converters is proposed. This method utilizes real power ...
