

Nauru: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Nauru is 100% electrified and has relatively low average electricity tariffs of 14USc/kWh. Imported petroleum fuels are the main energy source in Nauru. Renewable energy contributes around 1% to electricity supply with the remaining 99% provided by diesel generators.

Energy use refers to use of primary energy before transformation to other end-use fuels, which is equal to indigenous production plus imports and stock changes, minus exports and fuels supplied to ships and aircraft engaged in international transport.

NOTE: The information regarding Nauru on this page is re-published from the 2024 World Fact Book of the United States Central Intelligence Agency and other sources. No claims are made regarding the accuracy of Nauru 2024 information contained here.
