

NAWA Technologies has created a product that could revolutionise the electric vehicle world as we know it: the Ultra Fast Carbon Electrode. This new 3D electrode geometry can solve the vast majority of ...

As France looks to be a leader in next-generation battery production, company NAWA Technologies has developed an innovative solution that could catch the eye of electric vehicle manufacturers.

NAWA Technologies, pioneers of next-generation energy storage systems, announces it has hit a significant milestone with the start of manufacturing of its revolutionary Vertically Aligned Carbon Nanotube (VACNT) material.

NAWATEchnologies is a deep tech startup tackling climate change head on with a new generation of batteries. The company is developing and commercializing batteries with higher capacities, faster charging speeds, and longer lifespans. Its electrode material made from aligned carbon nanotube mats is helping revolutionize batteries.

Founded by Pascal Boulanger, who chairs the board of directors, the startup develops solutions around the "Vertically Aligned Carbon Nanotubes (VACNT)" technology. Its situation is rather ...

NAWA has said it is already producing electrodes with carbon nanotubes for batteries that could provide up to three times the energy density and ten times the power. This translates to much faster charging times and as up to five times longer battery lifespans.

NAWA's innovation is based on an innovative approach to the nanometric-scale manufacture of an electrode combining NAWA's 3D nanocarbon and nanoplatinum. It delivers a 20% performance gain.

Founded by Pascal Boulanger, who chairs the board of directors, the startup develops solutions around the "Vertically Aligned Carbon Nanotubes (VACNT)" technology. Its situation is rather unusual: placed in receivership, two offers have been made by its current shareholders.

NAWA Technologies (NAWA), a pioneer of revolutionary 3D nanotechnology to unleash fast, sustainable, and efficient energy storage, has achieved another world first, tripling the manufacturing capacity of its revolutionary Vertically Aligned ...

Nawa Technologies is developing and industrialising a unique electrode material that combines the best nano and clean technologies: the Ultra Fast Carbon Battery. Much more than just an innovation, it is a ground-breaking technology that stores more electricity, more rapidly.

## Nawa technologies batteries Nigeria

NAWA Technologies has created a product that could revolutionise the electric vehicle world as we know it: the Ultra Fast Carbon Electrode. This new 3D electrode geometry can solve the vast majority of performance constraints faced by global battery makers, boosting battery power, energy storage and also lifecycle exponentially while reducing ...
