

New Caledonia pace power systems

Why did pace become a leading telecom power solution provider?

It gave us a head start and footprint in DC Power Systems, which helped us become the leading telecom power solution provider it is today. PACE started off as a product services company in telecom power equipment. Pioneering the market, we have set our standards and are working towards an even brighter future.

What is the New Caledonia energy transition scheme?

Guided by the Agence Calédonienne de l'Energie (ACE), the New Caledonia Energy Transition Scheme (STENC) defines the island's energy policy up to 2030.

What is New Caledonia's main energy source?

New Caledonia depends on imports for 96% of its energy needs, mainly used in mining operations. Imports of coal and oil products remain the main energy sources of the territory.

How can the Caledonian authorities improve energy security?

Vulnerable in terms of energy, the Caledonian authorities are thus seeking to become less dependent on external energy sources and to improve the competitiveness of the territory. There is room for improvement as only 12% of electricity production comes from renewable sources.

Why did pace Digitek acquire lineage power?

Pace Digitek acquired Lineage Power from General Electric Company in the year 2014. The acquisition was a game-changer for us! It gave us a head start and footprint in DC Power Systems, which helped us become the leading telecom power solution provider it is today. PACE started off as a product services company in telecom power equipment.

Who is pace Digitek?

Changing the face of the major smart cities with projects ranging from Surveillance to Agritech, Pace Digitek is taking charge, elevating the world to be smarter and sustainable. Pace Digitek acquired Lineage Power from General Electric Company in the year 2014. The acquisition was a game-changer for us!

Energy Pool and Enercal are pioneering advanced microgrid solutions to support New Caledonia's transition from diesel generators to zero-carbon energy sources like PV and biofuels. A smart energy management system (EMS) to maximize ...

The French overseas territory of New Caledonia has hailed the switch-on of a 16MWp solar farm, with battery energy storage to be later attached, and another standalone 5MWh battery project as significant steps towards "100% renewable energy" targets.

Guided by the Agence Calédonienne de l'Energie (ACE), the New Caledonia Energy Transition

Scheme (STENC) defines the island's energy policy up to 2030. Adopted by Congress in 2016, STENC revolves around three main objectives: a sharp reduction in energy consumption, the development of renewable energies and the reduction of greenhouse gas ...

Spreading our wings across the continents, we have emerged as one of the leading service providers in Power Management, Optic Fiber Laying, and Energy Management Solutions. Our consistency, accessibility, and reliability have led us to the expansion of this scale.

Enerdata is working with ENERCAL - the TSO (transmission system operator) in New Caledonia - to elaborate electricity demand forecasts through 2040, as well as associated load curves. As a remote island territory, New Caledonia is not interconnected with other electricity grids, which means the power system manager faces significant challenges.
