

New Zealand solar power units for your home

Are solar panels grid connected in New Zealand?

Most homes in New Zealand are already connected to the national electricity grid, so most of the systems we install are grid connected. By adding PV (photovoltaic) solar panels to your home, you can generate direct current (DC) energy from the sun.

How do solar panels work in New Zealand?

Most homes in New Zealand are connected to the national electricity grid. By adding PV (photovoltaic) solar panels to your home, you can generate direct current (DC) energy from the sun. This energy is then converted from DC electricity into AC (alternating current) electricity suitable for ordinary household use, by an inverter.

How much does solar power cost in New Zealand?

According to the Electricity Authority, the average size of a residential solar power system installed in New Zealand today is 4.4 kW, which would cost roughly \$12,600*fully installed. A 4.4 kW solar power system would include 10 or 11 solar panels (depending on the size of the panels) and a 4 kW or 5 kW inverter. Is Solar Power Worth It?

Are solar panels a good investment in New Zealand?

A solar power system in New Zealand can easily earn a 10 to 15% return on investment. But this rate of return is likely to increase each year as the price of electricity continues to climb. Unsure if solar panels on your roof will be worthwhile or if the upfront cost will lead to a good payback?

How will New Zealand's energy bills compare to home solar?

New Zealand household energy bills have steadily increased by 3% per year in recent years, and are set to double by 2028, whereas the price of a solar energy system will likely decrease. So, these numbers will only continue to improve in favour of home solar! Increased property value
