Can solar panels be added to a new build?

For new builds and self-builds, you'll likely be looking at solar photovoltaic panels and/or solar hot water (solar thermal) systems. Instead of looking at options to traditional heating systems, solar panel installations can be added to new builds to improve the EPC and overall energy efficiency.

What is the construction and installation phase of a solar project?

With permits and financing secured, the construction and installation phase of a solar project can commence. This phase is where the physical solar panels and equipment are installed on-site and connected to the power grid. It includes several key steps that require careful planning and execution.

Can a solar panel be installed on a roof?

Yes, solar panels can be installed on a roof. With systems like Marley SolarTile™, the solar panel acts as the roof covering, reducing installation time. On retrofit projects, simply remove a section of tiles and install the solar panels in their place.

How do I choose a solar PV installer?

It should include an estimate for the annual solar PV generation and an estimate of the level of self-consumption of solar PV at the property. It is sensible to get at least 3 quotes before choosing your installer. Do not select the installer on cost alone as cheaper components may perform worse and have a shorter lifespan.

Can solar panels be installed on a building?

There are many ways of installing solar panels onto a building. However by far, the most aesthetically pleasing has to be integrated solar or BIPV (Building-integrated photovoltaics). When building from scratch developers have the luxury of easily integrating solar panels. Particularly into the roof.
