

Nicaragua energy holding company

Where does Nicaragua's energy come from?

With the government's openness toward private investment, 58% of the country's energy is currently produced by renewable sources whereas the remaining 42% comes from oil-based bunker fuel, according to estimates of the Nicaraguan Ministry of Energy and Mines (MEM).

Why does Nicaragua produce so much electricity?

This high contribution to emissions from electricity production in comparison with other countries in the region is due to the high share of thermal generation. Currently (November 2007), there are only two registered CDM projects in the electricity sector in Nicaragua, with overall estimated emission reductions of 336,723 tCO₂e per year.

What kind of energy does Nicaragua use?

As of 2020, renewables- including wind, solar, biofuels, geothermal, and hydro power - comprise roughly 77% of Nicaragua's total energy supply, with oil providing the remaining 23%.

Does Nicaragua produce oil?

Nicaragua itself does not produce oil. As a result, Nicaragua has historically relied on imports of fossil fuel resources. While the country still imports foreign oil, the increased production of renewable energy, like geothermal energy from Nicaragua's volcanoes, has reduced that dependency.

What percentage of Nicaragua's electricity is produced by hydroelectric plants?

Currently, hydroelectric plants account only for 10% of the electricity produced in Nicaragua. The public company Hidrogesa owns and operates the two existing plants (Centrales Hidroeléctricas de Amacuba and Santa Bárbara).

What are the problems faced by the electricity sector in Nicaragua?

This is one of the most acute problems faced by the sector in Nicaragua, as it leads to very large economic losses. This problem is partially caused by the widespread existence of illegal connections, altered metering systems and low bill collection capacity in certain areas. The regulatory entities for the electricity sector in Nicaragua are:
