What is an off-grid power system?

Most modern Off Grid Power Systems are designed using 'AC Coupling' which enable all of your homes energy requirements to be provided directly from the solar array during the day,unlike traditional 'DC Coupled' systems which must provide ALL their power from the battery storage system.

What is an off-grid Solar System?

An off-Grid system is a power generation system device that only relies on the sun as the only main energy sourceby using a series of photovoltaic solar PV modules to produce electrical energy as needed . ...  
Where,I CC is the CC input current (from PV array) and SF is a safety factor.

How do I design an off-grid solar or battery system?

The most important part of designing any off-grid solar or battery system is calculating how much energy is required per day in kWh. For grid-connected sites,detailed load data can often be obtained directly from your electricity retailer or by using meters to measure the loads directly.
