

Hybrid 3D Nanostructure-Based Hole Transport Layer for Highly Efficient Inverted Perovskite Solar Cells
Dan Ouyang, Cong Chen, Zhanfeng Huang, Lu Zhu, Yanfa Yan, and Wallace C. H. ...

o Demonstrated power conversion efficiency of $\geq 9\%$ for solution-processed organic solar cells (2015) o Demonstrated world-record conductivity of ≥ 3000 S/cm for PEDOT:PSS through a treatment with H₂SO₄, the highest ...

Solar power generation is a promising and sustainable source of energy that has gained significant attention in recent years due to its potential to reduce greenhouse gas emissions and mitigate ...

Terminal sliding mode control for maximum power point tracking of photovoltaic power generation systems ... Chiu, Chian-Song; Ouyang, Ya-Lun; Ku, Chan-Yu; Abstract. Publication: Solar ...

[5] Kuan Sun, Yijie Xia and Jianyong Ouyang, "Next-generation transparent electrode materials for organic solar cells" in "Solar cell materials, devices and systems", Taylor and Francis, to be published.

The nanofluidic crystal (NFC), of packed nanoparticles in micro-meter-sized confined space, is proposed as a facile, high-efficiency and high-power-density scaling-up scheme for energy ...

Solar energy materials, 21(1). 1990; p. 51-60. [2] Kolb GJ, Diver RB, Siegel N. Central-station solar hydrogen power plant. Journal of Solar Energy Engineering-Transactions of the ASME, ...

A hybrid renewable energy source (HRES) consists of two or more renewable energy sources, such as wind turbines and photovoltaic systems, utilized together to provide increased system efficiency ...

In addition to the heat-to-electricity conversion by the electronic unit from a temperature gradient due to the Seebeck effect, the ionic unit can generate electricity from temperature fluctuations owing to thermal ionic ...

The overall framework of the developed weather scenario generation-based probabilistic solar power forecasting (wsp-SPF) method is illustrated in Fig. 1. The two major ...

This paper describes a freestanding hybrid film composed of a conductive metal-organic framework layered on cellulose nanofibres which enables efficient solar power generation. The working principle, which is different from the ...

Efficient technologies for energy harvesting from the environment are highly desired to power Internet-of-Things (IoT) sensors free from batteries or cables. 1 Photovoltaic (PV) cells generating electricity

Ouyang Cong Solar Power Generation
