

Photovoltaic bracket anti-corrosion grade classification table

What is the best material for a PV bracket?

This characteristic makes aluminum a suitable choice for PV installations in coastal areas or locations with high humidity. At present, the main anti-corrosion method of the bracket is hot-dip galvanized steel with a thickness of 55-80 μm , and aluminum alloy with anodic oxidation with a thickness of 5-10 μm .

Which material should be used for photovoltaic (PV) support structures?

When it comes to selecting the material for photovoltaic (PV) support structures, it generally adopts Q235B steel and aluminum alloy extrusion profile AL6005-T5. Each material has its advantages and considerations, and the choice depends on various factors. Let's compare steel and aluminum for PV support structures:

What is galvanic corrosion in solar PV?

The life of a solar PV system may be seriously affected by galvanic corrosion. The type of metal and the atmospheric conditions such as moisture and chlorides can cause serious structural failures in racking and mounting components. Galvanic Corrosion and Protection in Solar PV Installations | Greentech Renewables
[Skip to main content](#) [menu](#)

How to choose a corrosion-resistant material for solar cells?

By choosing materials with high inherent corrosion resistance, the vulnerability of solar cell components to corrosion can be significantly reduced. For metallic components, selecting corrosion-resistant metals or alloys, such as stainless steel or corrosion-resistant coatings, can enhance their longevity and performance.

Can solar PV racking corrosion occur?

The metals in solar PV racking and mounting systems can be faced with corrosion if wrong metals are used together. The life of a solar PV system is 25 years, therefore system installers must target a similar life span for the racking materials. How does galvanic corrosion occur?

What are the components of a solar racking system?

In the solar industry, most of the racking system components (including the solar module frames) are either mill finish aluminum (aluminum alloy) or anodized aluminum (increased corrosion resistance). There are some bolts and nuts that are stainless steel, bronze or brass. The installer has to be careful in choosing the right material.

The photovoltaic bracket system mainly covers the support structure from the foundation connectors to the lower part of the component steel bracket between each other. ... the factory ...
