

# Photovoltaic panel installation electricity meter requirements

Do I need metering for my solar panel installation?

Remember, the specifics can vary based on your location and utility provider, so always seek guidance from local experts to make informed decisions about metering for your solar panel installation. In this blog post, we'll explore the considerations surrounding metering requirements for solar panel installations.

Do I need to change my meter for solar panels?

To determine whether you need to change your meter for solar panels, it's advisable to consult with your utility provider or an authorized solar installer. They can provide information about metering requirements specific to your location and guide you through any necessary metering upgrades.

Do I need a bidirectional or smart meter when installing solar panels?

Some regions mandate the installation of a bidirectional or smart meter when you install solar panels. Net Metering Policies: Many places have net metering policies that allow homeowners to receive credits for excess solar energy they contribute to the grid. For effective net metering, a bidirectional or smart meter is typically necessary.

Can a third party install solar PV on a single meter?

Note: You cannot have 2 contracts on a single meter. Thus, if you are a third party installing solar PV on another person's building or land then you will need to obtain written permission from the party who holds the existing electricity supply contract to deal with the MOP - or better yet get them to arrange all of this if you can!

What are the requirements for a PV installation?

Virtually all domestic PV installations will fall under the scope of Part P. Part P requires the relevant Building Control department to be notified and approve the work. There are two routes to comply with the requirements of Part P: Notify the relevant Building Control department before starting the work.

What is considered a stand-alone solar PV installation?
