Are solar panels a good alternative to solar water heating?

Solar PV panels offer a number of advantages beyond solar water heating. Due to their simpler design - solar photovoltaic panels have no moving parts - they need little long-term maintenance. It's also possible to use a solar panel system to heat your building's supply of hot water.

How do I design a solar PV system?

When designing a solar PV system, there are a number of important factors to consider: Orientation - the direction the system will face (e.g. south, east/west). For existing buildings with sloping roofs, this is clearly fixed and will influence the viability of installing solar (north-facing is not worthwhile in the UK).

Can solar panels power a water heating system?

Solar PV panels can also be used independently to power a traditional electrical water heating system. Instead of only offering solar water heating, solar photovoltaic panels provide an eco-friendly, cost-effective and efficient source of electricity.
