

The second paper [121], PEG (poly-ethylene glycol) with an average molecular weight of 2000 g/mol has been investigated as a phase change material for thermal energy storage applications. PEG sets were maintained at 80 °C for 861 h in air, nitrogen, and vacuum environment; the samples maintained in vacuum were further treated with air for a period of ...

More than a month ago, the ministry picked 249 projects from a tender for energy storage units within renewable electricity plants. They are eligible for EUR 268 million in total state aid, also from NRRP. However, not one signed the contract yet. First major BESS units, battery factories pave way for strengthening Bulgaria's energy storage ...

Bulgaria's National Hydrogen Roadmap, directed by the Ministry of Innovation and Growth, aims to stimulate hydrogen technologies across industry, energy, and transportation sectors. Aligned with broader European decarbonization objectives, it outlines a green hydrogen production plan and emphasizes regulatory, financial, stakeholder, and ...

While Bulgaria has an energy surplus and is a net exporter of electricity, anticipated future domestic consumption will grow slowly allowing Bulgaria to develop itself as an energy hub. Bulgaria has 12,668 MW of installed capacity enabling the country to meet and exceed domestic demand. The data shows that the electricity production was 45,322 ...

Research the key issues surrounding Renewable Energy law in Bulgaria. Bulgaria: Renewable Energy. Contributing Editor(s) Penkov, Markov & Partners. Nikolay Voynov. Head of Energy and Natural Resources Practice Group. View lawyer profile. ...

Bulgaria annually produces 150,000 tons of grey hydrogen, largely for industrial sectors. The potential shift to green hydrogen could benefit several industries. Bulgaria also plans to use renewable hydrogen for grid balancing and surplus ...

Bulgaria launched in mid 2019 its Renewable Energy, Energy Efficiency and Energy Security Program, with an estimated EUR 33 million budget to finance street lighting, geothermal and hydropower utilization, energy efficiency in buildings, and other projects.

Bulgaria proposes a share of 25% of energy from renewable sources in gross final consumption of energy in 2030 as contribution to the EU renewable energy target for 2030. Information provided in the draft plan shows that this contribution would ...

The Tenevo plant will add 238 MW of solar generation capacity to the Bulgarian national energy system, with a long-term plan to add on a 250MW capacity of behind-the-meter energy storage. This is an important project to advance towards Bulgaria's ambitious net-zero greenhouse gas emissions target by 2050 and reduce reliance on coal generation ...

6 ???&#0183; The grant scheme, funded under the National Recovery and Resilience Plan, provides a little over 1.15 billion leva to support the construction and commissioning of renewable energy storage facilities with at least 3,000 MWh of usable capacity, connected to Bulgaria's power transmission and distribution systems, the ministry said in a statement over the weekend.

The Energy Charter Treaty is the main international treaty in the energy sector that Bulgaria is a party to. It provides a multilateral framework for energy cooperation. In due course, Bulgaria also implements the relevant to ...

The objective of sizing renewable energy equipment is to know the definite number of individual equipment which would meet the energy requirement economically considering system design constraints. Various costs were studied in the literature as follows: (reference studies are discussed in Tables 3, 4, 6 and 8).. The cost of keeping the system components in a good ...
