Signatories to the contract with Renera include Russia's trade and industry ministry, the Kaliningrad regional government and administrative authorities in the Nemansky district of Kaliningrad, which will host battery production at an initial 4GWh plant in Kaliningrad.

The Rosatom State Nuclear Energy has announced its plans to build a 3 GW lithium-ion battery manufacturing facility in the Russian province of Kaliningrad. The province is located between Poland and Lithuania along the Baltic coast.

It will be built in the western Russian exclave of Kaliningrad and is to produce battery cells for electric vehicles and energy storage systems from 2026. The initial volume of the Russian Gigafactory is now given by Rosatom as at least 3 GWh - one gigawatt hour more than previously announced.

The battery manufacturing base in Kaliningrad was originally designed to have an initial annual production capacity of 2GWh, but its development plan has been revised with the initial annual production capacity now expanded to 3GWh.

Mishustin told a meeting of deputy prime ministers on December 26 that Russia had to achieve "technological sovereignty" for the automotive industry in particular -- and state-owned corporation Rosatom had started building a 4GWh lithium ion batteries plant in the Baltic Sea enclave of Kaliningrad.
