What is the difference between a solar panel and a roof mounting system?

Solar panel - this document uses the term solar panels as a collective term for solar thermal collectors and PV modules. Roof mounting system - a collection of parts or components designed to mount solar panels on the roof of a building.

How much does a flat plate solar thermal panel weigh?

an appropriate system of mechanical lifting should be provided. Flat plate solar thermal panels can weigh up to 80 kgeach when installing an integrated PV or solar thermal system,the underlay should always be checked for tears or other signs of damage and replaced as necessary.

Can a PV system be integrated into a flat roof?

In some cases,PV systems can be integrated directly into flat roofs (Figure 25),although this is not common because the efficiency of PV modules is reduced because the optimum angle relative to the sun is not achieved.

What is a roof mounting system?

Roof mounting system - a collection of parts or components designed to mount solar panels on the roof of a building. The system comprises all parts required to provide a structurally stable fixing and ensure the weathertightness,and fire performance of the roof meets the requirements of the building regulations.

How do you mount a solar thermal collector on a roof?

Above roof solar thermal collectors are generally mounted using hook or bolt-through fixings; these can be similar to those used on PV systems although the fixings tend to be of heavier construction to support the higher dead loads (Figure 28). Figure 28 Bolt fixing for solar thermal system.

Can a solar panel be installed on a roof?

No consideration has been taken on the effect that the solar panel will have over the roof structure. It has been assumed that the roof will be able to resist the additional loadings imposed by the installation of the solar panels in conjunction with the Clenergy Mounting System. Note 15.

It's ideal for larger installations, such as ground, flat roof, cabins and backyard sheds. Anywhere roof mounting is not a possibility, this solar panel mount can be applied. Adjustable angle from 30°; to 45°; Degree, right angle for best solar ...
