Do solar panels cause problems?

Thankfully, the rate of problems arising from solar panels is fairly low. Some 68% of solar panel owners told us they'd had no technical issues with their solar pv systems since they were installed. And nearly half of owners had done no maintenance at all on their solar panel system since it was fitted.

What are the environmental effects of PV solar energy?

Compared with fossil-based electrical power system, PV solar energy has significantly lower pollutants and greenhouse gases (GHG) emissions. However, PV solar technology are not free of adverse environmental consequences such as biodiversity and habitat loss, climatic effects, resource consumption, and disposal of massive end-of-life PV panels.

Can a cracked solar panel still be generating electricity?

The cracked panel may still be generating electricity but Ben Robinson, director of Exeo Energy, advises getting it replaced as soon as possible: "This will eventually result in issues, normally as soon as moisture enters the panel". See if you can get a replacement panel under warranty. If so, Mr Robinson advises that:

Do solar panels produce less power?

Less-than-perfect weather conditions are a fact of solar pv life and there's nothing you can do about it. Solar panels also degrade gradually over time. So, after a decade of ownership, your panels might produce slightly less power than they did when new.

Do solar panels degrade over time?

Solar panels also degrade gradually over time. So, after a decade of ownership, your panels might produce slightly less power than they did when new. You can find the expected degradation of your panels on their datasheet (search online for it using their make and model: find this on your MCS certificate).

What happens if a solar PV system fails?

But if your solar PV system does have problems, it can mean it stops producing electricity and needs urgent maintenance. That can be costly when you're used to using free solar power and have to use pricey grid electricity instead. Plus, you'll lose out on any payments you get for exporting electricity.
