How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

How does a photovoltaic system work?

The heart of a photovoltaic system is the solar module. Many photovoltaic cells are wired together by the manufacturer to produce a solar module. When installed at a site, solar modules are wired together in series to form strings. Strings of modules are connected in parallel to form an array.

Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m²/kWp, avoiding shading between the rows of modules. The design of a photovoltaic system, from the public operator's network to the photovoltaic modules, requires careful planning and compliance with local regulations.

What should a builder consider when designing a PV system?

PV Modules and the Building Design - The builder or PV designer must also consider the PV system and the building as a system. The PV array should be located considering the aesthetics of the building. As well, the modules must be located so that building features such as gables and overhangs do not shade the modules.

How do you ground a solar inverter?

System Grounding - System grounding requires taking one conductor from a two-wire system and connecting it to ground. In a DC system, this means bonding the negative conductor to ground at one single point in the system. This must be accomplished inside the inverter, not at the PV array.
