Why is site selection important for solar PV power plants?

Site selection for the utility-scale photovoltaic (PV) solar farm is a critical issue due to its direct impact on the power performance, economic, environmental, social aspects, and existing as well as future infrastructures. In this chapter, we conduct a literature review on site selection of solar PV power plants.

What is solar photovoltaic land suitability?

1. Introduction to Solar Photovoltaic Land Suitability Compared to other renewable energy sources (RES), solar energy is a low-density power supply that necessitates vast areas for exploitation. Also, solar photovoltaic (PV) technology has enormous potential for deployment where the amount of global solar radiation per year is very high.

Is solar PV a good source of electricity?

The potential for clean, carbon-free electricity generation from solar photovoltaic (PV) sources in most countries dwarfs their current electricity demand. Around 20% of the global population lives in 70 countries boasting excellent conditions for solar PV.

Is solar energy a good option for land use?

However, recent studies based on satellite views of utility-scale solar energy (USSE) under operation, either in the form of photovoltaics (PV) or concentrated solar power (CSP), show that their land use efficiency (LUE) is up to six times lower than initial estimates^{17,18,19}.

Which countries are addressing grid-connected solar PV?

More than 80% of studies are addressing grid-connected solar PV where China leads the site suitability studies followed by Spain and India. As per authors' knowledge, this is an original contribution to review site suitability methodologies, decision criteria, and restriction factors for the solar PV. 1. 2. 3. 4.

What is the future dynamic photovoltaic (PV) power generation potential?

In this study, the future dynamic photovoltaic (PV) power generation potential, which represents the maximum PV power generation of a region, is evaluated. This study predicts suitable land resources for PV systems and calculates the PV generation potential based on these predictions.
