

What is a solar thermal system?

The key element of solar thermal system is the solar thermal collector, which absorbs solar radiation. The purpose of the collector is to convert the sunlight very efficiently into heat. Solar heat is transmitted to a fluid, which transports the heat to the heat exchanger via pumps with a minimum of heat loss.

How do solar thermal power systems work?

All solar thermal power systems have solar energy collectors with two main components: reflectors (mirrors) that capture and focus sunlight onto a receiver. In most types of systems, a heat-transfer fluid is heated and circulated in the receiver and used to produce steam.

What is solar thermal energy?

solar thermal energy (STE) Solar. the conversion of the radiant energy from the sun into heat, which can then be used for such purposes as space and hot water heating, industrial process heat, or power generation. See below. solar thermal energy When a dark surface is placed in sunshine, it absorbs solar energy and heats up.

What is a solar thermal power plant?

Since steam turbines can only be operated economically above a certain minimum size, today's solar thermal power plants have rated outputs in the range of 50 to 200 megawatts. The main difference to a conventional steam power plant is the solar field, which supplies the heat for the steam generator.

What is a concentrated solar thermal (CST) power plant?

Concentrated solar thermal (CST) power plants, also known as the CSP systems, obtain the heat energy from solar radiations, for the subsequent conversion of heat into electrical energy. Large numbers of technologies have been developed so far for the concentration and collection of solar radiations.

What is solar thermal power generation?

Harnessing solar energy for electric power generation is one of the growing technologies which provide a sustainable solution to the severe environmental issues such as climate change, global warming, and pollution. This chapter deals with the solar thermal power generation based on the line and point focussing solar concentrators.
