

Suriname solution to inadequate storage facilities

Why is dumping a problem in Suriname?

Uncontrolled dumping leads to numerous health-related and negative environmental impacts, also due to exposure to hazardous and infectious waste. Lack of facilities and resources make that less than 1% of all hazardous and e-waste and less than 5% of all infectious waste generated in Suriname is collected and treated separately.

What will happen if Suriname's infrastructure is expanded?

Unless infrastructure in Suriname is expanded to the outer regions of the country and thence to its neighbors, it will continue to deteriorate and threaten an economic collapse. Water, railway, and flight are the main modes of travel and transporting goods across the forested areas of Suriname.

How much e-waste is collected in Suriname?

Lack of facilities and resources make that less than 1% of all hazardous and e-waste and less than 5% of all infectious waste generated in Suriname is collected and treated separately. The rest is dumped randomly on open dump sites.

map by which Suriname can work steadily to reduce and better manage waste, so that Suriname's environment is preserved and the health of its people is protected. Its objective is to support ...

In addition to storing food at suitable temperatures, smart food storage entails optimizing conditions like moisture and UV light exposure. Improving food storage conditions allows it to stay fresher (and edible) for longer, thus reducing the volume wasted.

map by which Suriname can work steadily to reduce and better manage waste, so that Suriname's environment is preserved and the health of its people is protected. Its objective is to support ROM with further Integrated Solid Waste Management and elaborating related waste management planning, policies and guidelines.

6 ???· Health facilities lack clean water, hindering medical services, while schools face disruptions due to non-functional sanitation facilities, impacting children's education and health.

Investment from the public and private sectors have enabled the development of the physical structure of the ports in Suriname, along with modernization of cargo holds and storage. This not only allows for easier transport but ensures greater protection of goods.
