

Technical regulations for microgrid access system

What are the International microgrid standards?

Thus, many international microgrid standards are still being developed, several standards are on-going drafting by IEEE and IEC organization, such as self-regulation of dispatchable loads, monitoring and control systems, energy management systems and use case design.

Are energy storage devices regulated in a microgrid?

For instance, in the first microgrid standard IEEE 1547.4, the electrical energy storage (EES) is solely regarded as a type of DER to be regulated without specific technical requirements. However, energy storage devices have gradually become a critical part of microgrid in terms of planning and operation stages [42,43].

What is considered a microgrid?

Microgrids considered in this document are alternating current (AC) electrical systems with loads and distributed energy resources (DER) at low or medium voltage level. This document does not cover direct current (DC) microgrids. Microgrids are classified into isolated microgrids and non-isolated microgrids.

Why do we need a standard system for microgrids and distributed energy resources?

The prosperity of microgrids and distributed energy resources (DER) promotes the standardization of multiple technologies. A sound and applicable standard system will facilitate the development of renewable energy and provide great guiding significance for technology globalization.

How many countries are able to develop microgrid related standards?

At the level of national standard, only a few countries have ability to independently formulate microgrid related standards. Most countries prefer to choose current IEEE and IEC standards for equivalent conversion as national standards [117, 121, 122].

What is a microgrid analysis?

These analyses include the microgrid type classification and application scenario, interaction capability between microgrid and distribution network, operation and control of energy storage system, and protection and stability requirements.
